<b>Preface</b>	<b>v</b>
<b>1 Preliminaries</b>	<b>1</b>
1.1 Spaces of integrable, continuous and absolutely continuous functions . . . . .	1
1.2 Convex functions and Jensen's inequalities . . . . .	6
1.3 Exponential convexity . . . . .	9
1.4 Opial-type inequalities . . . . .	10
<b>2 Fractional integrals and fractional derivatives</b>	<b>15</b>
2.1 The Riemann-Liouville fractional integrals . . . . .	15
2.2 The Riemann-Liouville fractional derivatives . . . . .	22
2.3 The Caputo fractional derivatives . . . . .	34
2.4 The Canavati fractional derivatives . . . . .	40
2.5 Relations between different types of fractional derivatives . . . . .	43
2.6 Composition identities for fractional derivatives . . . . .	47
2.6.1 Composition identities for the Riemann-Liouville fractional derivatives . . . . .	48
2.6.2 Composition identities for the Caputo fractional derivatives . . . . .	52
2.6.3 Composition identities for the Canavati fractional derivatives . . . . .	56
<b>3 Jensen-Opial type inequalities</b>	<b>61</b>
3.1 The Godunova-Levin and related inequalities . . . . .	61
3.2 Mean value theorems and exponential convexity . . . . .	66
3.3 Applications to Stolarsky type means . . . . .	72
3.4 Multidimensional generalizations of Opial-type inequalities . . . . .	77
<b>4 Generalizations of the Mitrinović-Pečarić inequalities</b>	<b>85</b>
4.1 The Mitrinović-Pečarić inequality for convex functions . . . . .	85
4.1.1 Mean value theorems and exponential convexity . . . . .	86
4.1.2 Applications to Stolarsky type means . . . . .	91

4.1.3	Opial-type inequalities for fractional integrals and fractional derivatives . . . . .	94
4.2	The Mitrinović-Pečarić inequality for relative convex functions . . . . .	100
4.2.1	Mean value theorems and exponential convexity . . . . .	102
4.2.2	Applications to Stolarsky type means . . . . .	106
4.2.3	Opial-type inequalities for fractional integrals and fractional derivatives . . . . .	108
4.2.4	Opial-type equalities for fractional integrals and fractional derivatives . . . . .	116
<b>5</b>	<b>Generalizations of Opial-type inequalities for fractional derivatives</b>	<b>123</b>
5.1	Inequalities with fractional derivatives of order $\alpha$ and $\beta$ . . . . .	124
5.2	Inequalities with fractional derivatives of order $\alpha$ , $\beta$ and $\beta + 1$ . . . . .	131
5.3	Inequalities with fractional derivatives of order $\alpha$ , $\beta_1$ and $\beta_2$ . . . . .	136
<b>6</b>	<b>Extensions of Opial-type inequalities for fractional derivatives</b>	<b>159</b>
6.1	Extensions of the Fink Opial-type inequality . . . . .	159
6.2	Extensions of the Agarwal-Pang Opial-type inequality . . . . .	172
6.3	Extensions of the Alzer Opial-type inequalities . . . . .	180
<b>7</b>	<b>Inequalities for integral operators with a kernel and applications to a Green function</b>	<b>219</b>
7.1	Inequalities for integral operators with a kernel . . . . .	219
7.2	Opial-type inequalities using a Green function . . . . .	224
<b>8</b>	<b>Weighted integral and discrete Opial-type inequalities</b>	<b>235</b>
8.1	Integral inequalities in one variable . . . . .	235
8.2	Multidimensional integral inequalities . . . . .	241
8.2.1	Improvements of Poincaré-type inequality . . . . .	242
8.2.2	Improvements of Wirtinger-type inequality . . . . .	249
8.2.3	Improvements of Sobolev-type inequality . . . . .	251
8.2.4	Improvements of inequalities due to Pachpatte . . . . .	254
8.3	Multidimensional discrete inequalities . . . . .	256
8.3.1	Improvements of the Agarwal-Pang inequality I . . . . .	257
8.3.2	Improvements of the Agarwal-Pang inequalities II and III . . . . .	260
	<b>Bibliography</b>	<b>267</b>
	<b>Index</b>	<b>272</b>
